## PREFACE

The Chesapeake Bay Bibliography was initiated seven years ago by the Virginia Institute of Marine Science in response to growing resource management problems of the Chesapeake Bay and its tributaries. With these problems came the realization that planning and management of such a great natural resource is an overwhelming task requiring the best available information. This bibliography, therefore, was undertaken to document existing sources of information, to help identify research and data gathering needs, and to develop a comprehensive research and information services programs for individuals interested in research on, and management of the natural resources of the Chesapeake Bay region.

By January, 1975, three volumes of the bibliography had been published. Volume I (1971) summarized information sources dealing with the James River, while Volumes II (1972) and III (1975) focused on the Virginia and Maryland segments, respectively, of the Chesapeake Bay and its tributaries.

Compared to previous volumes, the Chesapeake Bay Bibliography - Volume IV: Virginia addresses a larger geographic and subject study area. Not only does this volume include and update the water resource-oriented citations contained in Volumes I and II, but it also identifies information sources dealing with the land resources of Virginia's nine coastal planning regions. This enlargement reflects the growing concern over land and water resource interrelationships, and was made to help meet the information needs of government and citizen groups involved

in Virginia's Coastal Resources Management Planning Program.  
Subsequent volumes of the bibliography will seek to update and  
improve this information base.

## ACKNOWLEDGEMENTS

Many individuals at the Institute assisted in this revision. Special thanks go to Susan O. Barrick, head librarian, for directing the update and helping locate pertinent references; Ron L. Schmied, coastal zone management advisory specialist, for his work in procuring funding for the revision, developing the geographical locator code and providing liaison to the regional planning district commissions; and Ginny Shaw, computer programmer, for preparing the program and coordinating the computer center staff in this update.

The staffs of the Northern Virginia, RADCO, Northern Neck, Middle Peninsula, Richmond Regional Crater, Southeastern, Peninsula, and Accomac-Norhampton Planning District Commissions deserve our sincere thanks for providing access to natural resource publications and information contained in their respective libraries. Without their assistance, this update and expansion of the bibliography would not have been possible.

We also wish to thank the National Oceanic and Atmospheric Administration, U.S. Department of Commerce, for providing the financial assistance needed to complete and publish this update. Specifically, the update was jointly financed by the Office of Coastal Zone Management, Grant Number 04-6-158-44037, the National Sea Grant Office, Grant Number 04-6-158-44047, and the General Fund of the Commonwealth through its appropriation to the Virginia Institute of Marine Science.

## GUIDE TO USERS

The Chesapeake Bay Bibliography: Volume IV - Virginia is a subject index of literature concerning the land and water resources of the Commonwealth's portion of the Chesapeake Bay region. Books, periodicals, published and unpublished governmental, academic, and private reports, theses and dissertations have been consulted to determine their suitability for inclusion in the bibliography. Each pertinent publication was read and a maximum of ten descriptors were assigned. In addition, geographical codes were added to the descriptors to indicate the geographical area to which the publication applies. Each completed source citation, therefore, includes standard bibliographical information, descriptors and geographical codes.

The descriptors used in the Bibliography were developed from the Water Resources Thesaurus, published by the U.S. Department of the Interior. Geographical locator codes were developed by Institute personnel. A complete listing of the content descriptors and geographical codes begins on page viii.

Upon completion, each source citation was assigned an accession number, keypunched onto computer cards, and then loaded and stored on computer tape record. This information record is computer searchable by subject, author and geographical locator code. In addition, practically all information sources cited in the Bibliography are available from VIMS library

or on microfiche from MERRMS.

Volume IV is divided into three sections. The first section is the subject or descriptor index. In this section, all descriptors listed separately, in alphabetical order, and each descriptor heading is followed by a list of the accession numbers of the sources which address the particular subject in question. In addition, each accession number listed is accompanied by the descriptors and geographical codes assigned to the citation it represents. The second section gives the complete citation listed numerically by accession numbers. The third section lists citations, alphabetically, by author.

The user can approach the bibliography in two ways: by subject or by author:

- (1) If the user wants information on a particular subject, "blue crab", for example, he can go to the Subject Index (Section 1) where he will find accession numbers for all citations containing information on the subject "blue crab". Since descriptors are presented with each accession number, the user can more easily discriminate among the various listings to identify specific articles of interest. Thus, if he is interested only in molting of the blue crab, he can select only those accession numbers which give "molting" as a descriptor. Then, taking these accession numbers, the user can refer to the Numerical Index (Section 2) to find the complete citations.
- (2) If the user knows the author of a particular report, he can go directly to the Author Index (Section 3) where he will find the complete citation and descriptors for that document (as well as any other reports by that author).
